

## In Vehicle ANPR /LPR Systems

- Ruggedised PC Unit
- Image & Data Capture
- Police, local Authority & Security Applications
- Data Import into Related database
- Fast Capture up to 130MPH
- Can be used with normal CCTV Cameras
- Integration with D.V.L.A. Database
- Graphical user & Management reporting
- Same User Front end as plettac OCIS.

The portable **ANPR** system has been developed for versatile applications where immediate information is required, this can be for police, local authority or Security Applications.

With integration of the DVLA database the system can be used for vehicle licence evasion, lapsed MOT's, lack of insurance etc, this enables the user to stop the offending vehicle & issue warning notices. The system stores images along with the details, this means warning notices can be issued after the event

The **In Vehicle** system comprises of a ruggedised PC, small monitor screen plettac can also supply CCTV cameras for use with the system, or use cameras already fitted to the vehicle, this can be discussed at the time of planning. All information gathered by the PC can be transferred to a main database PC, therefore allowing the unit to be re-used quickly & effectively.

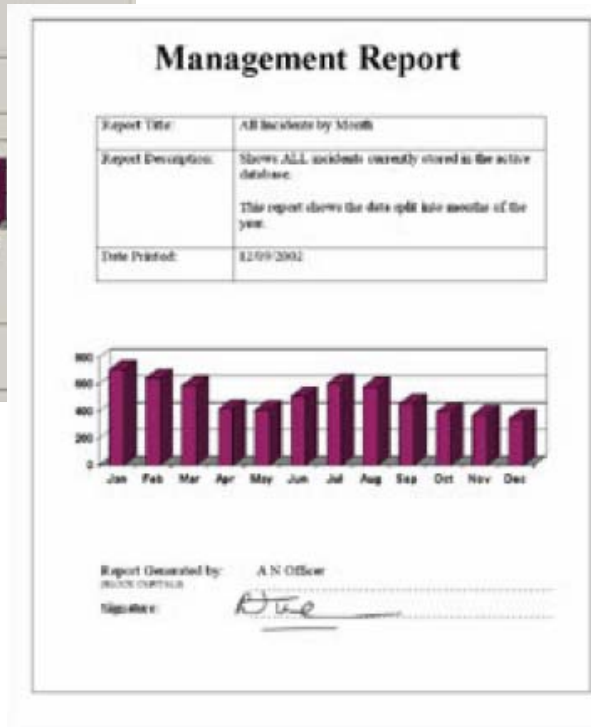

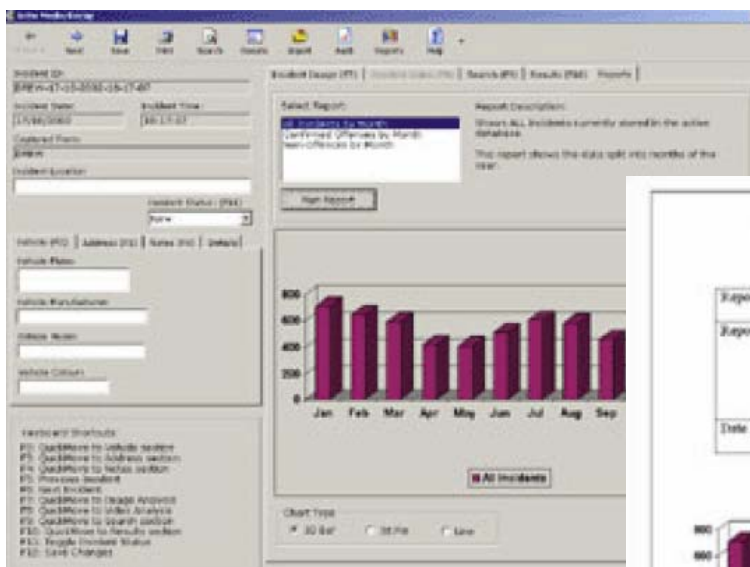

Picture clarity & enhancement tools are supplied along with the interface to aid the user correctly identifying important licence plates.

## In Vehicle ANPR /LPR Systems

The RECAP database can provide graphical reports, these can either be saved or printed as required, these reports can be customised to each customers individual requirements. The database can be search with time and date, by licence plate numbers, & by use of wild cards should the user not have the full licence plate.

For security reasons the system also keeps a full log of all operations performed, therefore providing an audit trail to aid proving continuity of evidence.
