The **SentiO – MP4 Client** is a software program enabling users to connect to multiple plettac **SentiO** systems across a LAN or WAN.

The Client software can be supplied as part of a machine or just the software for the customer to install on their own compatible PC. (please see minimum specifications on reverse)

The **SentiO-MP4** can connect to & configure any MP4/800 DVR connected to a LAN or WAN, any changes take effect immediately without the need for a reset or restart.

The look & feel of the Client software package is the same as the MP4/800 DVR GUI, this provides similar functions to the server unit. **SentiO MP4** Client software provides full control of a remote client displaying up to 16 cameras, from multiple servers in playback or live, Cameras can be grouped & control playback using one set of controls.

The **SentiO-MP4** Client can playback up to 16 recorded video streams from servers on the LAN or WAN. Normal controls similar to a VCR or DVD-recorder are provided freeze frame, single frame advance, fast forward & reverse helps to make this machine user friendly. Recorded footage can be searched using time & date, alarms inputs or VMD events.

The **SentiO-MP4** Client is compatible with CDR & DVD-R drives to make exporting footage a uncomplicated process, to aid compatibility the user can export video in the following formats DVD-video, AVI & WMF, the client software includes the necessary players & software for this function. The player can also be exported with the video clips onto CD or DVD allowing these to be played on a PC using windows XP once the player has been installed.

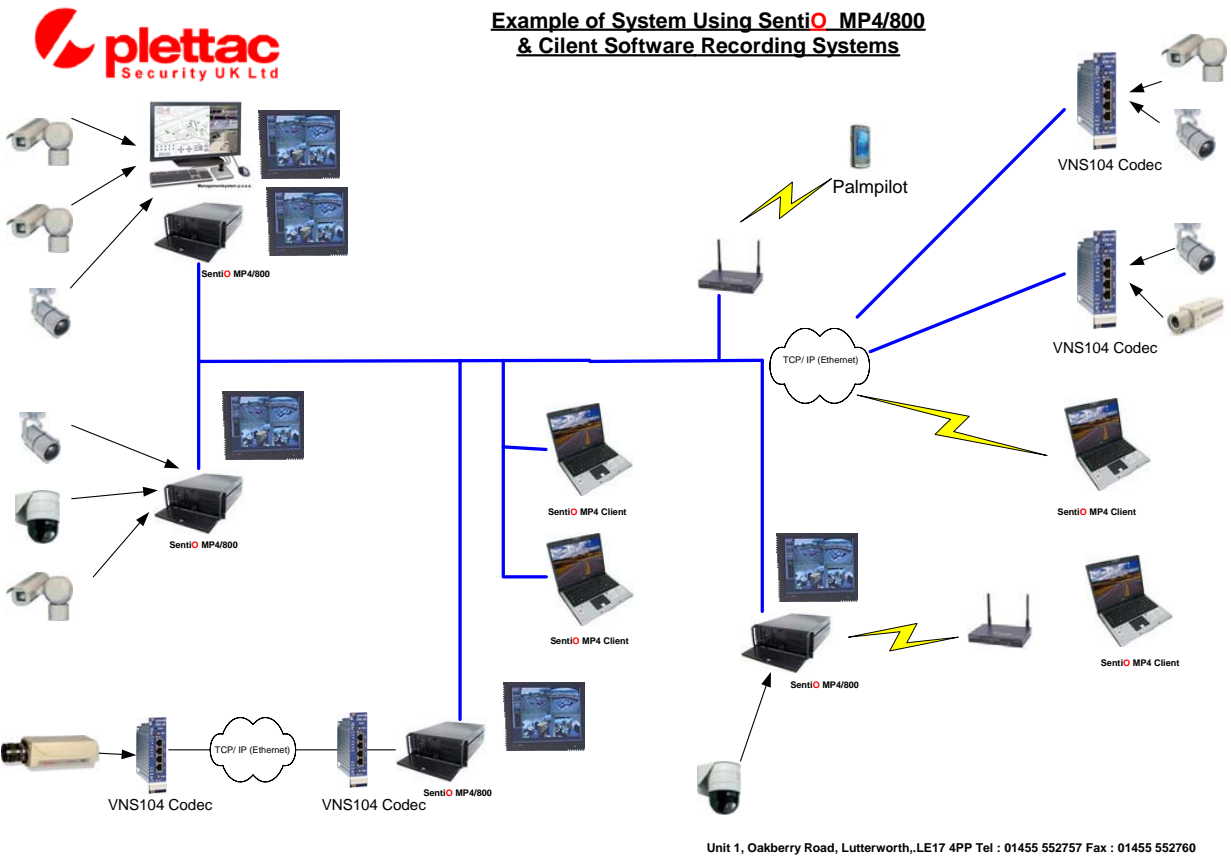

SentiO- MP4 / 800 Client Software
