

CUVSS - Static Colour Under Vehicle Scanning System

- High Resolution Colour Images
- Minimal Disruption to Traffic Flow
- Scene cameras Incorporated into system
- Integration with ANPR / LPR Systems
- Vehicles can travel up to 30 Km/h over CUVSS
- All Weather Operation
- Can be Integrated in to Network System
- Touch Screen Operation
- Scanning of all vehicles without adjustment
- PIP Images Possible
- Multiple Language Formats available

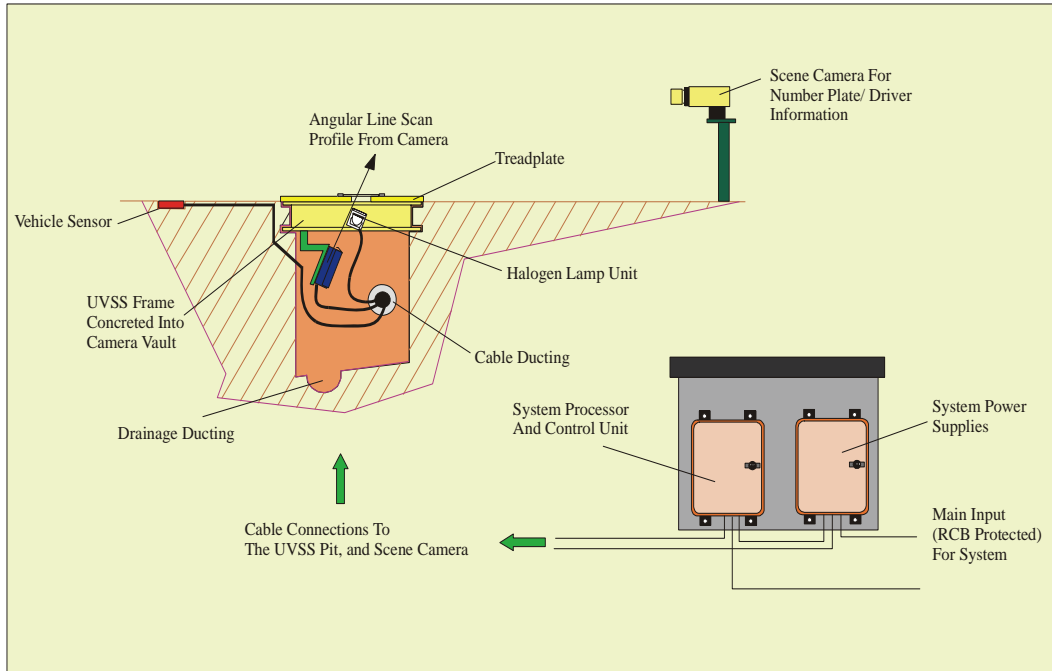

Overview :- The CUVSS system is designed to provide a fast & effective way of screening the underside of vehicles entering / exiting a given location. The system provides high resolution images of vehicles passing over the system within seconds. More detailed images can be obtained by using the zoom features of the system. ANPR / LPR & overview cameras can be incorporated into the system and these images tagged to the underside view for future use.

Details :- The system can aid the identification of suspicious packages / items hidden under vehicles entering sensitive areas. Providing a images in a format that can be stored on the HDD or transferred to other storage media. Systems can be networked across TCP /IP networks, therefore the images scanned on a vehicle at one site can be compared to images of a vehicle taken at another location. Images are also stored in the local database allowing vehicles visits to the compared, link this system with ANPR and the stored images can be automatically retrieved for comparison.

CUVSS - Static Colour Under Vehicle Scanning System

The static system requires to be mounted under the surface & requires some civils works, a pit will need to be excavated and suitable ducting and drainage for the CUVSS system. Sensor of some type will also need to be located in front of the scanning location, the type of sensor will be agreed at the time of installation. Once the civils works have been completed the cables can be pulled in and the equipment installed, then the tread plate fitted.

Plettac security UK Ltd will be on hand with any assistance required during all sections of the installation.

Other Products & Services

- CCTV Cameras
- Digital Recording Systems
- Biometric Access Control
- Access Control
- Pre-build & FAT Testing
- System Design
- IR Illumination
- Rapid Deployment Systems
- System Integration
- Fibre Optic Transmission Systems
